

DOMESTIC Cheaper greener home heating

Hydro-Genie is a patented technology to reduce energy consumption in central heating systems. It also reduces carbon emissions and combats rust and limescale, without the use of chemicals. Hydro-Genie can be fitted to wet heating systems fuelled by gas, oil, LPG, biomass, and heat pumps.

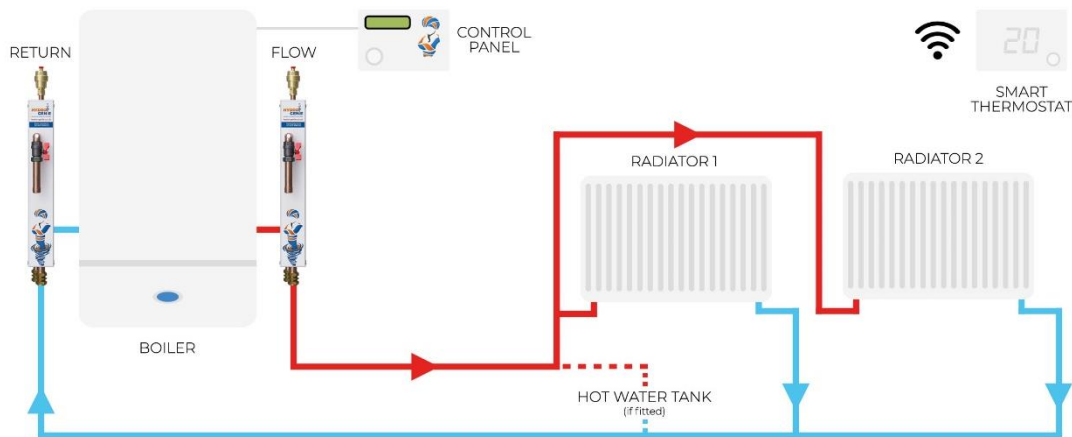

save up to **50%** energy use

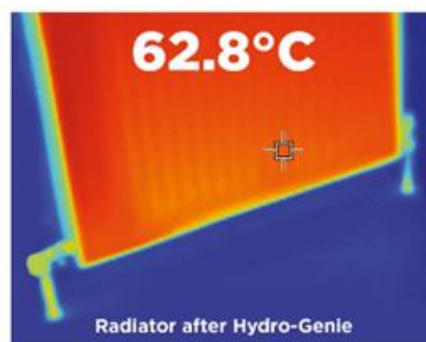

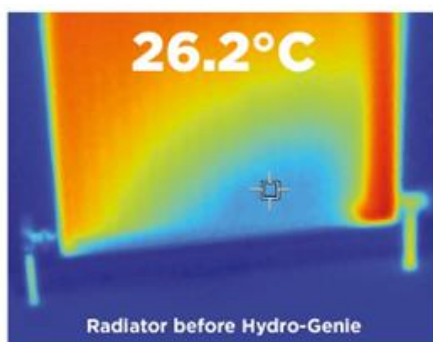

“Hydro-Genie cuts our heating bills hugely.”

How it works

The chemical-free Hydro-Genie system uses fluid dynamics to remove dissolved oxygen molecules from the water in central heating systems. This greatly improves heat transfer which reduces energy consumption and cuts carbon emissions.

[Platinum system shown]

Rust & Limescale

Removing dissolved oxygen from the water prevents the build-up of rust, sludge and limescale. This further enhances heat output and reduces wear and tear on the boiler and radiators, increasing their lifespan.

Cost

Hydro-Genie units can be installed in properties ranging from small flats to large houses to medium-sized commercial buildings. It is available in two specifications: Gold and Platinum. The Gold system installs a single unit on the boiler Return flow. The Platinum systems installs two units: one on the Flow and one on the Return.

Gold Hydro-Genie: up to 30% energy saving

£1,999 + VAT

22-28mm pipework

(no VAT on domestic properties)

Platinum Hydro-Genie: up to 50% energy saving

£3,499 + VAT

22-28 mm pipework

(no VAT on domestic properties)

10 Year Warranty

“We had the Hydro-Genie installed last winter and have seen savings of around 50% in our gas consumption. My house is much warmer even though I’ve turned down the boiler.” Mr Stephen Cranston, Dunblane
